

Brainstorming & Idea Prioritization Template

Date	02 July 2026
Team ID	XXXXXX
Project Name	A Comprehensive Measure of Well-Being (HDI Prediction System)
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Sikaram Dedeepya	Collect and clean the HDI dataset from UNDP/World Bank sources, handling missing values and outliers.	Data Preparation	1
2	Kashifunissa Syed	Build a Machine Learning model to classify countries into Very High, High, Medium, and Low HDI tiers based on indicators.	Core ML	2
3	Monika Pampana	Perform Exploratory Data Analysis (EDA) and visualize correlations between life expectancy, education, and GNI.	Data Visualization	3
4	Parchuri Navya	Develop a Flask-based web application where users can input country indicators and get real-time HDI predictions.	Web Application	4
5	Kowsar Shaik	Evaluate the model using accuracy, confusion matrix, and perform hyperparameter tuning to improve prediction accuracy.	Model Optimization	5
6	Parchuri Navya	Implement a feature to compare multiple algorithms (SVM, Logistic Regression, Random Forest) to find the best performing model.	Advanced Feature	6

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority (High/Medium/Low)	Selected (Yes/No)
1	Data Collection & Preprocessing Pipeline: Creating a robust pipeline to clean and prepare the UNDP HDI dataset.	High	High	High	Yes
2	HDI Tier Classification Model: Training a Random Forest Classifier to accurately predict the 4 HDI development tiers.	High	High	High	Yes
3	EDA & Interactive Visualizations: Generating heatmaps and pairplots to understand feature relationships before modeling.	High	Medium	Medium	Yes
4	Flask Web Interface: Building a user-friendly frontend and backend API for real-time HDI predictions.	High	High	High	Yes
5	Model Evaluation & Tuning: Using GridSearchCV and	Medium	High	Medium	Yes

	cross-validation to optimize model performance and prevent overfitting.				
6	Multi-Algorithm Comparison Dashboard: Building a UI to compare outputs of SVM, Logistic Regression, and Random Forest.	Medium	Low	Low	No <i>(Deferred to future scope)</i>
